Profile Summary:

Software Engineer with 1.5 years of professional experience in frontend development, specializing in building responsive email templates using HTML5, CSS3, and JavaScript. Strong foundation in Java, Spring Boot, Spring Security, RESTful APIs, MySQL, and Angular, with hands-on experience developing scalable full-stack applications. Proficient in Data Structures & Algorithms, object-oriented programming, and modern software development practices. Passionate about building secure, high-performance applications and eager to contribute as a Java Developer or Full Stack Developer.

Professional Experience:

Associate Software Engineer
Webberax, Chennai.

December 2024 – June 2026

- Developed responsive and cross-browser compatible email templates using HTML5, CSS3, and JavaScript for global email marketing campaigns.
 - Converted UI designs into pixel-perfect, mobile-friendly email templates while ensuring compatibility across major email clients.
 - Optimized email layouts for improved rendering performance and accessibility.
 - Performed testing, debugging, and issue resolution to ensure consistent behavior across different devices and email platforms.
 - Collaborated with designers, QA engineers, and project stakeholders to deliver marketing campaigns within deadlines.
 - Maintained reusable template structures and adhered to coding standards for efficient development.
-

Technical Skills:

- **Programming:** Java, SQL
 - **Frameworks/Libraries:** Spring Boot, Spring Security, Hibernate, Spring Data JPA
 - **Web Architecture & Concepts:** RESTful APIs, MVC Architecture, Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA)
 - **Authentication & Security:** JWT Authentication, Role-Based Access Control (RBAC)
 - **Database Management:** MySQL, Relational Database Design (RDBMS), ORM Mapping
 - **Tools & Version Control:** Git, GitHub, Maven, Postman, IntelliJ IDEA / Eclipse
 - **Other Technologies:** API Integration, JSON, Token-Based Security, CRUD Operations, Database Normalization, Software Development Life Cycle (SDLC)
-

Projects

E-Commerce Backend System

- Technologies: Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate, JWT, MySQL, Maven, Stripe API
- Designed and developed a scalable RESTful backend application using Spring Boot and MySQL following enterprise-level architecture.
- Implemented secure authentication and authorization using Spring Security and JWT.
- Developed REST APIs for user management, product catalog, shopping cart, and order processing.
- Designed relational database schemas to efficiently manage Users, Products, Orders, and Shopping Cart entities.
- Integrated Stripe Payment Gateway to process secure online payments.
- Implemented transactional rollback mechanisms to maintain database consistency during payment failures.
- Used Hibernate and Spring Data JPA for efficient database interaction.
- Tested APIs using Postman and documented endpoints using Swagger.
- Followed clean architecture principles and modular code organization.

Multi-Vendor Marketplace & Real-Time Auction System

- **Technologies:** Java, Spring Boot, Angular, TypeScript, Spring Security, Spring Data JPA, JWT, MySQL, Redis, WebSockets, Apache Kafka, Maven
- Designed and developed a high-throughput, distributed full-stack multi-vendor marketplace using Spring Boot RESTful APIs and an Angular Single Page Application (SPA).
- Built a responsive vendor dashboard using Angular, leveraging RxJS observables and Behavior Subjects for real-time state management of inventory and analytics.
- Implemented real-time, low-latency live bidding and customer notifications by integrating Spring WebSockets (STOMP) with the Angular frontend.
- Extended Spring Security and JWT to support multi-tenant role-based access control (RBAC), securing separate entry pathways for Admins, Vendors, and Customers.
- Configured an Angular HTTP Interceptor to automatically attach JWT authorization headers and implemented Route Guards to restrict unauthorized page access.
- Utilized Redis as a distributed caching layer for heavy database queries like public product catalogs, significantly reducing database load and latency.
- Implemented Apache Kafka as an asynchronous event-driven message broker to handle background tasks such as order processing and instant inventory updates.
- Used Hibernate and Spring Data JPA to manage complex relational database schemas in MySQL, optimizing database interactions with custom query fetching strategies.
- Tested backend APIs comprehensively using Postman and executed frontend unit testing using Karma and Jasmine to ensure cross-stack reliability.

Education:

B.E - Computer Science & Engineering
EGS Pillay Engineering College

Nagapattinam
Jun 2020 – Apr 2024

SSLC & HSC - Maths & Computer Science
Government Higher Secondary School

Sankaranpandal
Jun 2017– Apr 2020

Certifications

- **Full Stack Development** – Besant Technologies
- **Data Structures and Algorithms** – Udemy
